

PRESS RELEASE

ULO and LBP Optics exhibit expanded product range at Laser World of Photonics, Munich

24-27 June 2019, Hall B2 Stand 124

Specialist optics manufacturers ULO and LBP Optics are exhibiting together for the first time at Munich this year. Already well known for their range of reflective and refractive optics, thermal imaging optics and beam delivery equipment, the company has been investing in both metrology and additional manufacturing capability to offer customers a wider range of products and services.

The company is now able to supply complex components with extremely demanding specifications with the addition of a single point diamond machining facility. This enables them to produce a multitude of highly accurate shapes including polygons, cones, pyramid scanning mirrors, infrared domes, aspherics, ellipsoids, toroids and off-axis parabolics. Samples of these products will be on view at stand 124 during the show.

Managing Director Paul Maclennan explains, 'We are producing growing numbers of complex parts for customers who need extreme accuracy in terms of surface roughness, dimensional tolerance and reflectivity. We're supplying specialist diamond machined parts for a wide range of applications including defence, scientific instruments, laser systems and research and development, and we expect this growth to continue.'

The group of companies has also expanded its metrology capability over the last 12 months and can now offer customers highly accurate measurements for xxx xxx xxx xxx

LBP Optics and ULO Optics will be exhibiting a range of their products including metal mirrors, diamond machined components, infrared and thermal imaging optics and beam delivery systems.

Hall B2 Stand 124.
