

PRESS RELEASE

**Laser Beam Products Exhibit Unique Range of Infra Red Mirrors
for Science and Research**

22-25 June 2015, Laser World of Photonics, Munich, Hall B2 Stand 118

Laser Beam Products (LBP), the largest manufacturer of infra red mirrors in the UK, will be in Munich again this year showcasing its unique range of mirrors and its now well-established mirror reworking service.

Laser Beam Products will have on view a wide range of their mirrors including Gold coated Copper, Aluminium, Molybdenum, Stainless Steel and Tungsten. All these materials have excellent broad reflectivity across the mid infra red, and are ideal for many infra red applications. They are highly durable and resistant to harsh environments such as gas sensing and infrared counter measures (IRCM).

With an excellent range of reflective coatings covering the spectrum from UV to THz, LBP have an unrivalled range of products which can be seen, and handled, at this years show. Suitable for CO₂ laser cutting and welding, fiber laser applications, Dental and Medical Er:YAG lasers, QCL sources, fiber lasers and even Terahertz applications LBP's mirrors are regularly supplied for both low volume prototype and high volume production parts. Customers include industrial laser users, OEMs, Academics and Research Institutes around the world.

LBP's customers worldwide are also regularly saving thousands by repairing mirrors back to operational condition after damage by exposure to chemicals and harsh environments. Examples of 'before' and 'after' mirrors will be on display.
